The economical surveillance solution

Ideal CCTV can offer high profile Mobile Car CCTV applications, incorporating 3G Mobile Network connections and Auto Download (activated as vehicles approach the Wireless Docking Station at the local Branch). For most TAXI / Cab Services and sole proprietors this is not an affordable option.

We have created a TAXI CCTV Kit that satisfies minimum requirements whilst delivering up to Real-Time Recording at DVD Quality.

We offer professional installation, as well as sale of DIY Kits.

The very small mobile vehicle camera achieves the same high specification of its larger CCTV Camera brothers in a highly efficient compact design.

The selected model comes with a tilt-over bracket, which allows mounting in many positions, including over head ceiling mount.
